EXAMINER'S AMENDMENT

- An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
- The application has been amended as follows: On page 2, of the specification, line 8, after, "09/364,365", please insert, "now Patent No. 6,393,145".
- Claim 7, line 1, please change, "claim 6", to read, "claim 1".
- Claim 9, line 1, please change, "claim 6", to read, "claim 1".
- Authorization for this examiner's amendment was given in a telephone interview with Mr. Jens C. Jenkins on 13 April 2005.

REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a processing device associated with a display device, wherein the display device has a plurality of pixels each having a plurality of pixel sub-components, a method of processing image data in preparation for displaying an image on the display device such that the pixel sub-components represent different portions of the image and the image is rendered with a desired degree of luminance accuracy and a corresponding desired degree of color accuracy. The closest prior art, Hooks, Jr. (USPN 4,463,380), shows a similar system, in which, an image processing system wherein information corresponding to a selected geographical region or geometric system is stored and selectively retrieved and processed to reproduce images corresponding to selected portions of the geographical or geometric system, wherein the information is initially recorded photographically and subsequently stored in a digital recording system. However, Hooks, Jr. fails to address: "for passing a signal in which the image data is encoded through a low-pass filter, the signal having a plurality of channels each representing a different color component of the image, and the

low-pass filter including filtering coefficients selected to establish a desired tradeoff between color accuracy and luminance accuracy; filtering a signal to obtain a third sample to be mapped to a third pixel sub-component of a particular pixel, including passing a first channel through a seventh filter, a second channel through an eighth filter, and a third channel through a ninth filter; a plurality of filters for obtaining samples that map spatially different regions of an image to individual pixel sub-components of a particular pixel, the plurality of filters including filters having filtering coefficients that have been selected to at least approximate the coefficients of optimized filters that minimize an error metric constructed for the display device". These distinct features have been added separately to different independent claims and render them allowable.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
